

# *Annual Nitrogen Application Rates*

| lbs N per 1000 ft <sup>2</sup> | Plant Response   |
|--------------------------------|--|
| 0                              | May reduce growth of turf and younger woody plants                               |
| <b>2</b>                       | <b>Optimal for healthy turfgrass and most woody plants</b>                       |
| 4                              | Only used for sparse turf when rejuvenating and younger woody plants             |
| 6                              | usually excessive – increased susceptibility to disease in turf and woody plants |
